CAUTION

To gain the best performance of the tool, prolong the duty life, make the Warranty valid if necessary, and to avoid hazards of fatal injuries please read and understand this Manual before using the tool.

Keep this manual for future references.

The illustrations in this manual are for reference only. They might be different from the real tool.

Use and care recommendations

THERMAL PROTECT

When the machine overheats, the thermal protector will activate, turning the welder off and turning the LED light ALARM on.
Let the welder cool for 15 minutes and turn it back on.

It is recommended to use a 12 AWG extension cord and connect it to an INDEPENDENT CHARGING CENTER.

Perform periodic **MAINTENANCE** to your machine (page 11).

Technical specifications

SOIN-250

Code •

17411

Description •

Inverter welder

Input

Voltage •

220 V~

Frequency •

50 Hz / 60 Hz

Current •

55 A

Input Rated Capacity •

12.1 kVA

No. of Phases •

2 Phases

Output

Open Circuit Voltage •

SMAW: 76 V c.c.

TIG: 14.5 V c.c.

Current Range •

30 A - 250 A

Work Cycle •

50% 5 minutes' work per 5 minutes' rest.

The output values specified are given to a 68 °F in higher temperatures, the work cycle shall be reduced.

Type of Cooling •

Fan Forced

Weight •

19 lb

Output terminals •

1/2" quick connector

Insulation •

Class I

IP Grade •

IP21S

Conductors •

H07RN-F x 3G (4.0 mm²) with 221 °F insulation temperature

Power cord grips used in this product: Type "Y".

Build quality: Basic insulation

Thermal insulation winding: Class H

WARNING Avoid the risk of electric shock or severe injury. When the power cable gets damaged it should only be replaced by the manufacturer or at a **TRUPER**® Authorized Service Center. The build quality of the electric insulation is altered if spills or liquid gets into the tool while in use. Do not expose to rain, liquids and/or dampness.

WARNING Before gaining access to the terminals all power sources should be disconnected.

Power Requirements

WARNING • The tool shall be grounded while in use to prevent electric shock.

The welder shall be set up as close as possible from the main power source. Check the supply carries the same voltage indicated in the motor nameplate.

WARNING • This tool shall be grounded.

CAUTION • Power cables are coded with the following colors:

GREEN	GROUND
WHITE	CURRENT
BLACK	CURRENT

• When using the welder together with more tools sharing the same ground, connect in parallel. Never in series.

CAUTION • The gauge of the ground conductor cable shall not be of a smaller gauge than the power supply cable.

CAUTION • A professional electrician shall carry out the connection to the power supply.

CAUTION • Always confirm the input voltage connection stated in the welder nameplate matches the power supply.

CAUTION • The power cable gauge shall comply with the following requisites:

Switch $\geq 30\text{ A}$

Fuse (Rated Work Current) $55\text{ A} (*)$

Electric Wire $\geq 2.5\text{ mm}^2$

* Fuse fusion current is double than its rated current.

• If extension cables are needed between the welder and the work piece increase the welding cable caliber to keep the welder power output with a potential drop not higher than 4 V

General Power Tools Safety Warnings

⚠ WARNING! Read carefully all safety warnings and instructions listed below. Failure to comply with any of these warnings may result in electric shock, fire and / or severe damage. **Save all warnings and instructions for future references.**

Work area

Keep your work area clean, and well lit.

Cluttered and dark areas may cause accidents.

Never use the tool in explosive atmospheres, such as in the presence of flammable liquids, gases or dust.

Sparks generated by power tools may ignite the flammable material.

Keep children and bystanders at a safe distance while operating the tool.

Distractions may cause loss of control.

Electrical Safety

The tool plug must match the power outlet. Never modify the plug in any way. Do not use any adapter plugs with grounded power tools.

Modified plugs and different power outlets increase the risk of electric shock.

Avoid body contact with grounded surfaces, such as pipes, radiators, electric ranges and refrigerators.

The risk of electric shock increases if your body is grounded.

Do not expose the tool to rain or wet conditions.

Water entering into the tool increases the risk of electric shock.

Do not force the cord. Never use the cord to carry, lift or unplug the tool. Keep the cord away from heat, oil, sharp edges or moving parts.

Damaged or entangled cords increase the risk of electric shock.

When operating a tool outdoors, use an extension cord suitable for outdoor use.

Using an adequate outdoor extension cord reduces the risk of electric shock.

If operating the tool in a damp location cannot be avoided, use a ground fault circuit interrupter (GFCI) protected supply.

Using a GFCI reduces the risk of electric shock.

Personal safety

Stay alert, watch what you are doing and use common sense when operating a tool. Do not use a power tool while you are tired or under the influence of drugs, alcohol or medication.

A moment of distraction while operating the tool may result in personal injury.

Use personal protective equipment. Always wear eye protection.

Protective equipment such as safety glasses, anti-dust mask, non-skid shoes, hard hats and hearing protection used in the right conditions significantly reduce personal injury.

Prevent unintentional starting up. Ensure the switch is in the "OFF" position before connecting into the power source and / or battery as well as when carrying the tool.

Transporting power tools with the finger on the switch or connecting power tools with the switch in the "ON" position may cause accidents.

Remove any wrench or vice before turning the power tool on.

Wrenches or vices left attached to rotating parts of the tool may result in personal injury.

Do not overreach. Keep proper footing and balance at all times.

This enables a better control on the tool during unexpected situations.

Dress properly. Do not wear loose clothing or jewelry. Keep hair, clothes and gloves away from the moving parts.

Loose clothes or long hair may get caught in moving parts.

If you have dust extraction and recollection devices connected onto the tool, inspect their connections and use them correctly.

Using these devices reduce dust-related risks.

Power Tools Use and Care

Do not force the tool. Use the adequate tool for your application.

The correct tool delivers a better and safer job at the rate for which it was designed.

Do not use the tool if the switch is not working properly.

Any power tool that cannot be turned ON or OFF is dangerous and should be repaired before operating.

Disconnect the tool from the power source and / or battery before making any adjustments, changing accessories or storing.

These measures reduce the risk of accidentally starting the tool.

Store tools out of the reach of children. Do not allow persons that are not familiar with the tool or its instructions to operate the tool.

Power tools are dangerous in the hands of untrained users.

Service the tool. Check the mobile parts are not misaligned or stuck. There should not be broken parts or other conditions that may affect its operation. Repair any damage before using the tool.

Most accidents are caused due to poor maintenance to the tools.

Keep the cutting accessories sharp and clean.

Cutting accessories in good working conditions are less likely to bind and are easier to control.

Use the tool, components and accessories in accordance with these instructions and the projected way to use it for the type of tool when in adequate working conditions.

Using the tool for applications different from those it was designed for, could result in a hazardous situation.

Service

Repair the tool in a **TRUPER® Authorized Service Center** using only identical spare parts.

This will ensure that the safety of the power tool is maintained.

Children or people with reduced physical, sensory or mental capabilities shall not operate the tool, neither inexperienced people or without knowledge in the use of the tool, unless supervised by a person responsible of their safety or if receiving previous instructions about the tool operation.

Children shall be kept under supervision to double-check they will not play with the tool. Tight supervision shall be used with children or disabled persons to prevent from using or being close to any household tool.

Safety Warnings for Inverter Welders

 **TRUPER®**

Protection Equipment for Welding

- ⚠ WARNING** • Wear a welding mask to protect eyes and face when soldering. Assure the mask protective glass shade is adequate for the soldering process to carry out.
- ⚠ CAUTION** • Wear leather gloves specially made for welding as well as leather dungarees and gaiter.
- Wear robust clothing and long sleeves made of fire-resistant materials such as wool or leather.
 - Use special screens or curtains to insulate the work place from passersby, to protect them from sparks, flares and slag originated by the soldering process.
 - Benches and work tables where work pieces shall rest, must have orifices or slots that can easily let through residues originated by the soldering process.

Prevent Electric Shock

- ⚠ CAUTION** • Verify there is a safe connection for the input and output cables. They shall be correctly insulated and the connections in good repair (check and eliminate any possibility of electric shock).
- ⚠ CAUTION** • Double check the welder is plugged to a reliable ground connection.
- ⚠ CAUTION** • Do not expose the welder to rain or humidity.
- ⚠ CAUTION** • The user shall be insulated from the work piece and ground connection stepping onto insulating and dry mats.
- ⚠ DANGER** • For any reason touch the two poles in the welder circuit (welding stick and work piece).
- ⚠ WARNING** • Do not try to adjust the welder current when carrying out a soldering job.
- ⚠ CAUTION** • Connect the ground clamp to the work piece as close as possible to the welding zone. This prevents the current to flow long distances and eliminate the possibility of short circuit.
- ⚠ WARNING** • The work piece shall make contact with the ground connection clamp before operating the welder. Do not disconnect until finishing welding because it can lead to an electric discharge and severe injury.
- ⚠ WARNING** • Disconnect the welder from the power supply before carrying any maintenance jobs.

Fire Prevention

- ⚠ CAUTION** • Have always handy a fire extinguisher in good conditions.
- ⚠ WARNING** • There shall not be flammable or explosive materials in the work area (no less than 36'). Do not carry out soldering jobs where the sparks can reach or fall onto flammable or explosive materials.
- ⚠ WARNING** • Soldering sparks may cause explosion or fire.

Prevent Health Risks

- ⚠ WARNING** • Vapor and gases produced while soldering is dangerous to your health. Work in well ventilated areas or with adequate ventilation systems.
- ⚠ WARNING** • Do not breath in smokes and gasses emanated from the soldering process. Keep your head away from vapors.
- ⚠ DANGER** • If ventilation is poor use an adequate autonomous breathing device because the gases generated when soldering may displace air and cause a fatal accident.
- ⚠ CAUTION** • Do not operate the welder near de-greasing agents, cleaning products or aerosol containers. Heat and radiation from the welding process may react to those vapors forming toxic gases.
- ⚠ CAUTION** • Avoid soldering metals covered in lead, zinc or cadmium. Those materials generate toxic gases. Otherwise, remove the covering from the welding area. Make sure the work area is well ventilated or wear an adequate autonomous breathing device.

Prevent Injuries and Accidents

- ⚠ WARNING** • Risks of electric shock:
An electric shock coming from the soldering electrode may cause death. Do not weld under rain or snow. Do not touch the electrode with your bare hands. Do not wear damp or damaged gloves. Personal protection against electric shock: insulation from the work piece. Do not open the equipment enclosure. Do not weld on top of drums or any closed container.

- ⚠ WARNING** • Risks generated by the welding arc:
Radiation coming out from the arc may burn eyes and damage skin. Wear face mask and protection glasses. Wear hearing protection and protective clothes that protect skin up to the neck. Wear full-body protective clothes.

- ⚠ WARNING** • Risk induced by electro-magnetic fields:
Welding current produces electro-magnetic fields. Do not use this power source if having a medical implant. Never roll up the welding cable around your body. Set together and parallel both welding cables so the fields of each cable counteract.

- ⚠ WARNING** • Do not use the welder power source to de-ice pipes.
- ⚠ CAUTION** • Never allow unexperienced people to dismantle or regulate the welder.

- ⚠ WARNING** • Double check that the operator and the welder are away from the sparks and residues trajectory originated by the soldering process:

- The welder shall be operated in a place protected from sun and rain. Away from places where violent vibrations are present.
- Store the welder in a place free of humidity with a range of temperature from -13 °F to 131 °F

- ⚠ CAUTION** • Environment temperature range: When welding: 14 °F, up to 104 °F

- There shall be a 11.8" space around the welding machine to allow good ventilation.

- ⚠ CAUTION** • The base of the welding power source must be inclined at a maximum of 10° to avoid overturning.

- ⚠ CAUTION** • Double check no foreign metal piece is inside the welder.

- ⚠ WARNING** • Any problem with the welder that cannot be fixed by the operator making the adjustments needed for a good welding job shall be carry out in a  **TRUPER®** Authorized Service Center. For any reason try to open the welder housing to carry out any type of maintenance.

Use of Compressed Gas Cylinders

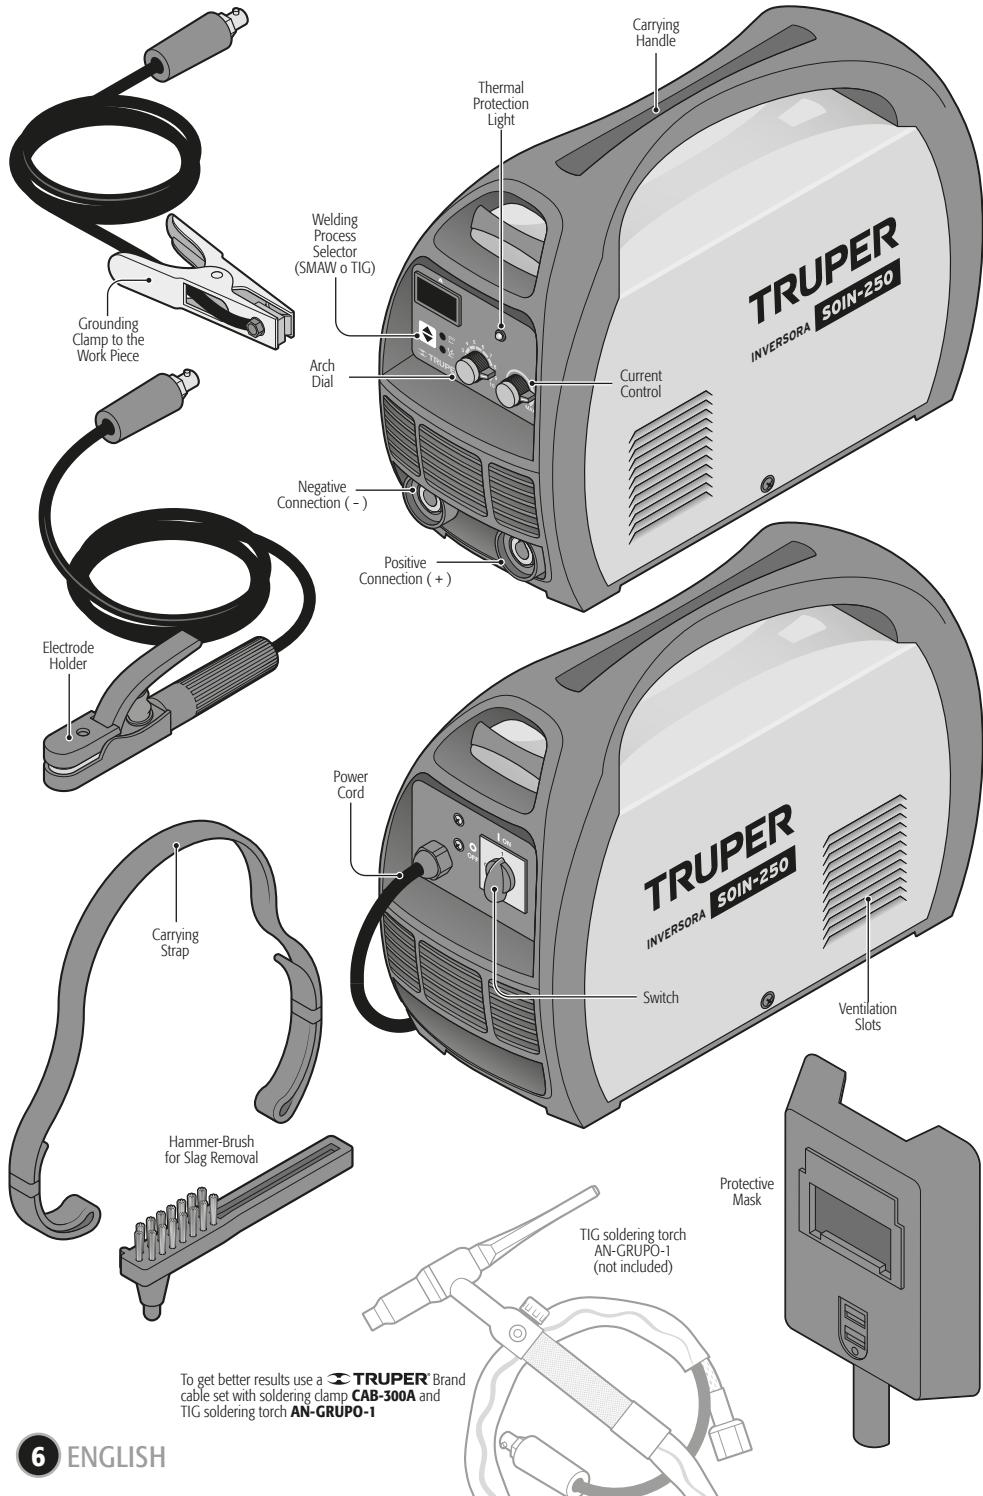

- ⚠ WARNING** • Compressed gas cylinders are widely used in many welding processes. If not stored, handled, inspected and used adequately compressed gas cylinders may be fatal. Can explode or turn into missiles, drawing such force they can even break brick walls.
- ⚠ CAUTION** • Inspect the cylinders. Look for external corrosion, indentation, lumps, holes of wells. If in doubt about any imperfection observed is acceptable for those guidelines, stop using the cylinder. Consult the gas safety page before using it.

- ⚠ CAUTION** • Many compressed gases not only represent a physical hazard but also dangerous to your health. Be sure you learn the danger to your health and how to be protected. Always follow the use and handling caution measures provided in the safety page.

- ⚠ CAUTION** • Never set the cylinders next to heat or flame or where they can be part of an electric circuit. Do not use them as a source of ground during the electric welding process.

- ⚠ WARNING** • Wear safety glasses and a protective mask when connecting and disconnecting regulators and lines to the cylinder.

- ⚠ CAUTION** • Close the cylinder valve to release pressure before removing the regulator and when not in use. Cylinders shall be stored with a visible identification and with the protection valve cap fitted.

Installation (SMAW)

 **TRUPER**[®]

Connections

CAUTION To prevent an electric shock, the user must see the information in "Power Requirements" in page 3 and 5.

- The fast connections of the electrode holder and the ground clamp are inserted and turned one quarter of a turn in a clockwise direction in the outlets set in the front panel to secure perfectly.
- Press the upper arrow in the process selector to set the welder working in SMAW mode (coated electrode).

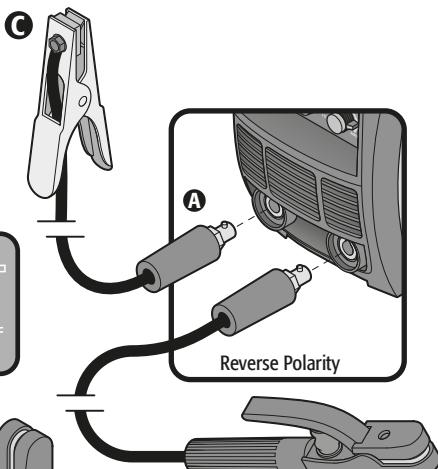

NOTE The upper LED in the selector will light on.

Reverse Polarity (A)

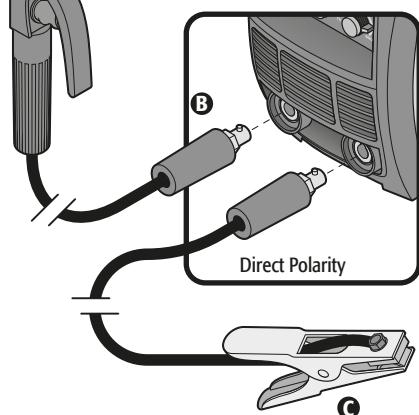

- Connect the grounding clamp cable to the negative (-) output clamping screw of the welder.
- Connect the grounding clamp (C) to the work piece.
- Connect the electrode holder cable to the positive (+) output clamping screw of the welder.

This configuration generates more heat in the electrode, which produce more penetration with basic electrodes, making it ideal to weld thick pieces.

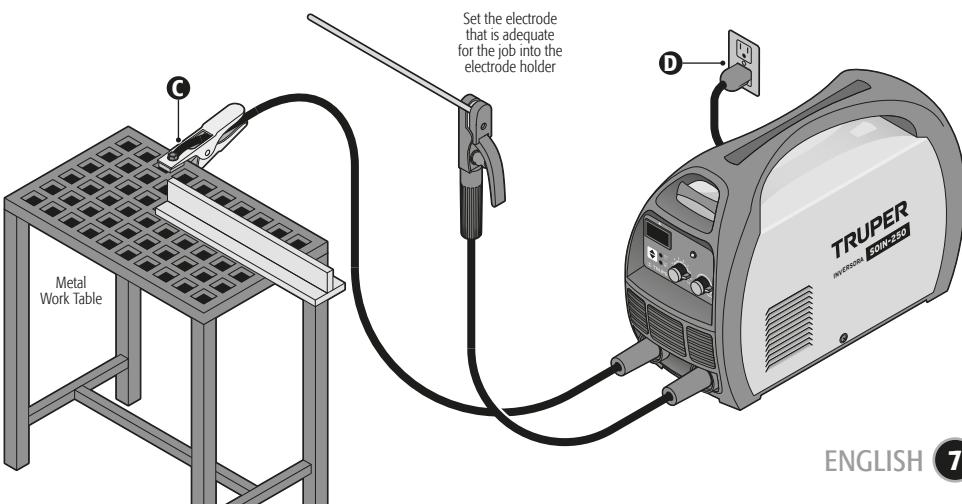

Direct Polarity (B)

- Connect the grounding clamp cable to the positive (+) output.
 - Connect the grounding clamp (C) to the work piece.
 - Connect the electrode holder cable to the negative (-) output.
- This configuration generates more heat in the work piece, thus producing less malformation in the work piece and narrower joints making it ideal for thin pieces.
- Connect the power cable (D) to the power network to the work voltage (220 V~).

WARNING Before using the welder, it shall be correctly grounded. The ground cable shall not be uninstalled because it propitiates severe bod injuries.

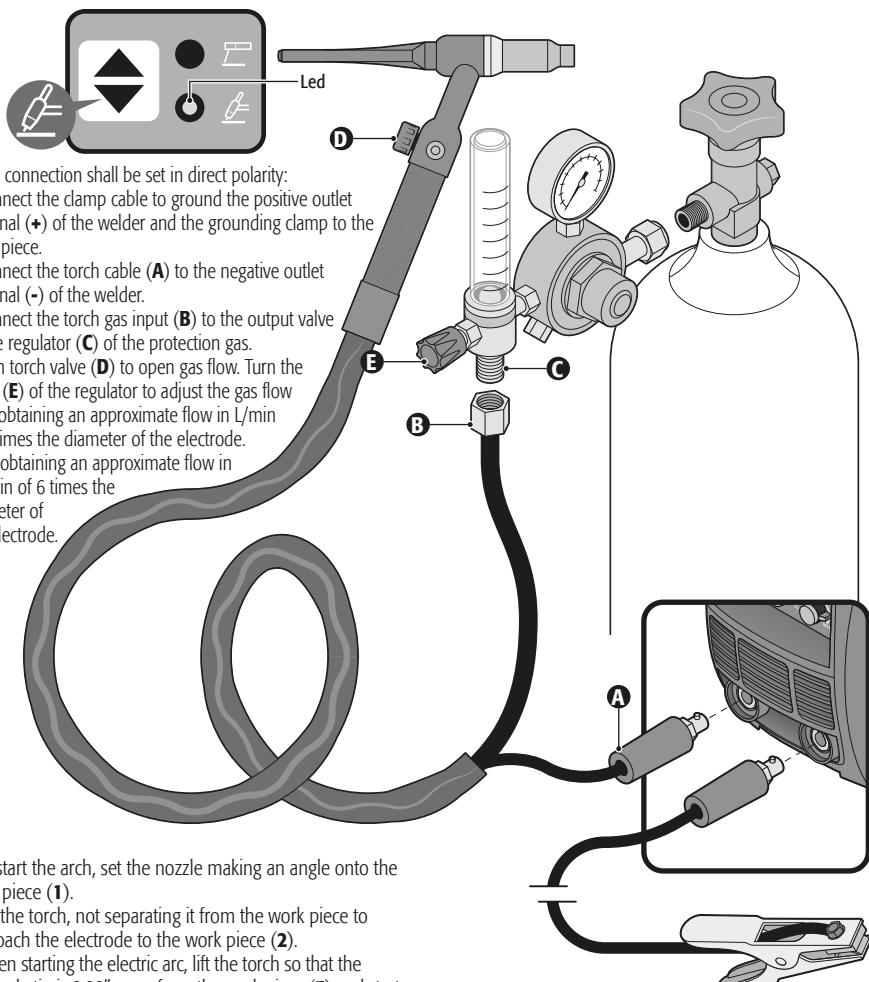

Set the electrode that is adequate for the job into the electrode holder

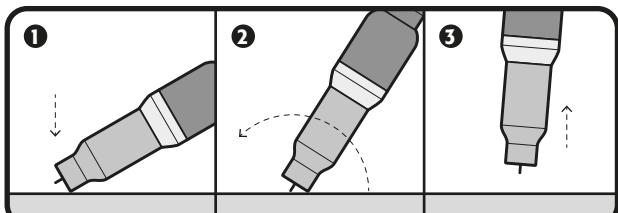

TIG Connection

- This inverter welder can also be used for TIG welding, a high-quality welding process with non-consumable tungsten electrodes and arch protected with inert gas like argon gas o helium.
- TIG welding is ideal to weld stainless steel, iron and copper.
- With this process, a AN-CRUPO-1 torch and a can of protective gas are required (not included).
- Press the lower arrow in the process selector to set the welder into the TIG mode. (Tungsten electrode).

NOTE The LED facing down will turn ON.

- To start the arch, set the nozzle making an angle onto the work piece (1).
- Lift the torch, not separating it from the work piece to approach the electrode to the work piece (2).
- When starting the electric arc, lift the torch so that the electrode tip is 0.08" away from the work piece (3) and start welding.
- It is advisable to keep the electrode 90° vertical during the welding to guarantee the protection of the gas.

Start Up

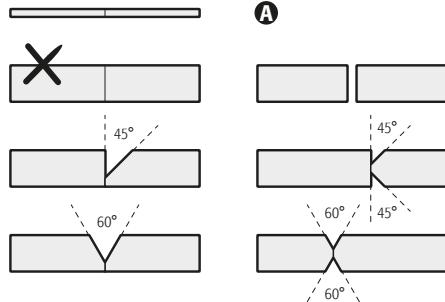

TRUPER®

Preparation

- Only through experience, practice and care a good welding process can be guaranteed.
- The factors arousing in the welding process are many: current required, distance between the electrode and the work piece, speed and direction of the welding, thickness and type of material, position of the work piece and welding direction, and also, the gauge, material and covering of the electrode. Thus, it is advisable that before carrying out a weld, try to practice in scrap material to determine which are the specific requirements for the job ahead.
- The area in the work pieces where the weld is to be applied shall be clean, free of oxidation and paint.
- The joints between sheets with calibers larger than 1/8" shall be beveled so the weld will be adequate (A).

Welding

- Set the switch (B) in the ON position I.
 - Adjust the current control adjustment (C1), and the arch enforcement (C2) until reaching the adequate arch current and intensity suitable for the job.
- Current is indicated in the panel screen (D).
- Hold the electrode holder or torch in the most comfortable position possible. Be aware that during the welding process, the angle, movement and distance with regards to the work piece shall be constant and uniform.
 - Aim the electrode tip towards the joint to be welded to generate the electric arch and be able to start welding.
 - Once the arch is ON start welding, keeping always the electrode tip 0,08" away from the work piece. If welding with the electrode onto the work piece, it could stick and the weld would have a poor quality.
 - In the event of overheating, the welder will stop working and the thermal protection indicating light (E) will be ON. Do not turn OFF the welder. Wait for the indicator light turns OFF to use it again.

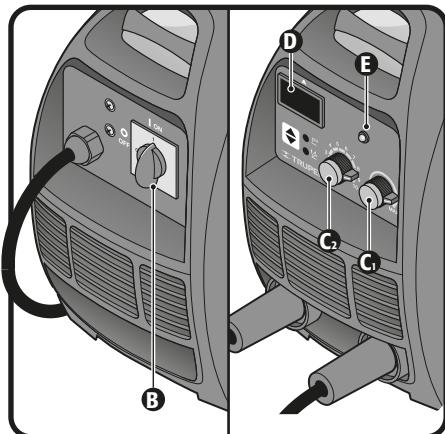

Arch Reinforcement

- During the weld process, generate an arch with enough intensity, enough to burn the electrode constantly. If the arch generated with the configured current (C1) is not showing the intensity needed, use the "Arch Reinforcement" knob (C2).

- Turn the reinforcement knob in a clockwise direction to increase the welding arc intensity.
- If the arch is too intense, turn the knob in a counterclockwise to decrease the intensity.

▲ NOTE The arch adjustment is very fine and delivers a better control in the final aesthetics of the joint.

Electrode Replacement

SMAW:

- When the electrode has burned 0.4" to 0.7" from the electrode holder, replace it with a new one to be able to keep on welding.

▲ CAUTION • The electrode burns in high temperatures. Do not try to handle the electrode remains with your hand. Put the remains in a metal container.

- Open the electrode holder tong to hold the uncovered end of the new electrode. Do not hold the electrode in the covered part.

TIG:

- Tungsten electrodes shall be sharpened to guarantee the weld quality in a longitudinal direction.
- The tungsten electrode tip gets deformed due to the heat. Therefore, when the tip is not showing an angle, it is recommended to sharpen it again.

Slag Removal

- Upon finishing the welding job, use a wire brush to remove slag from the welding joint surface.

▲ CAUTION • Wait until the slag has cooled down and hardened to be able to remove it.
• When hitting or brushing slag to remove it, there can be particles shooting out. Wear eye protection and keep bystanders away.

Supplies

For coated electrode processes (SMAW)

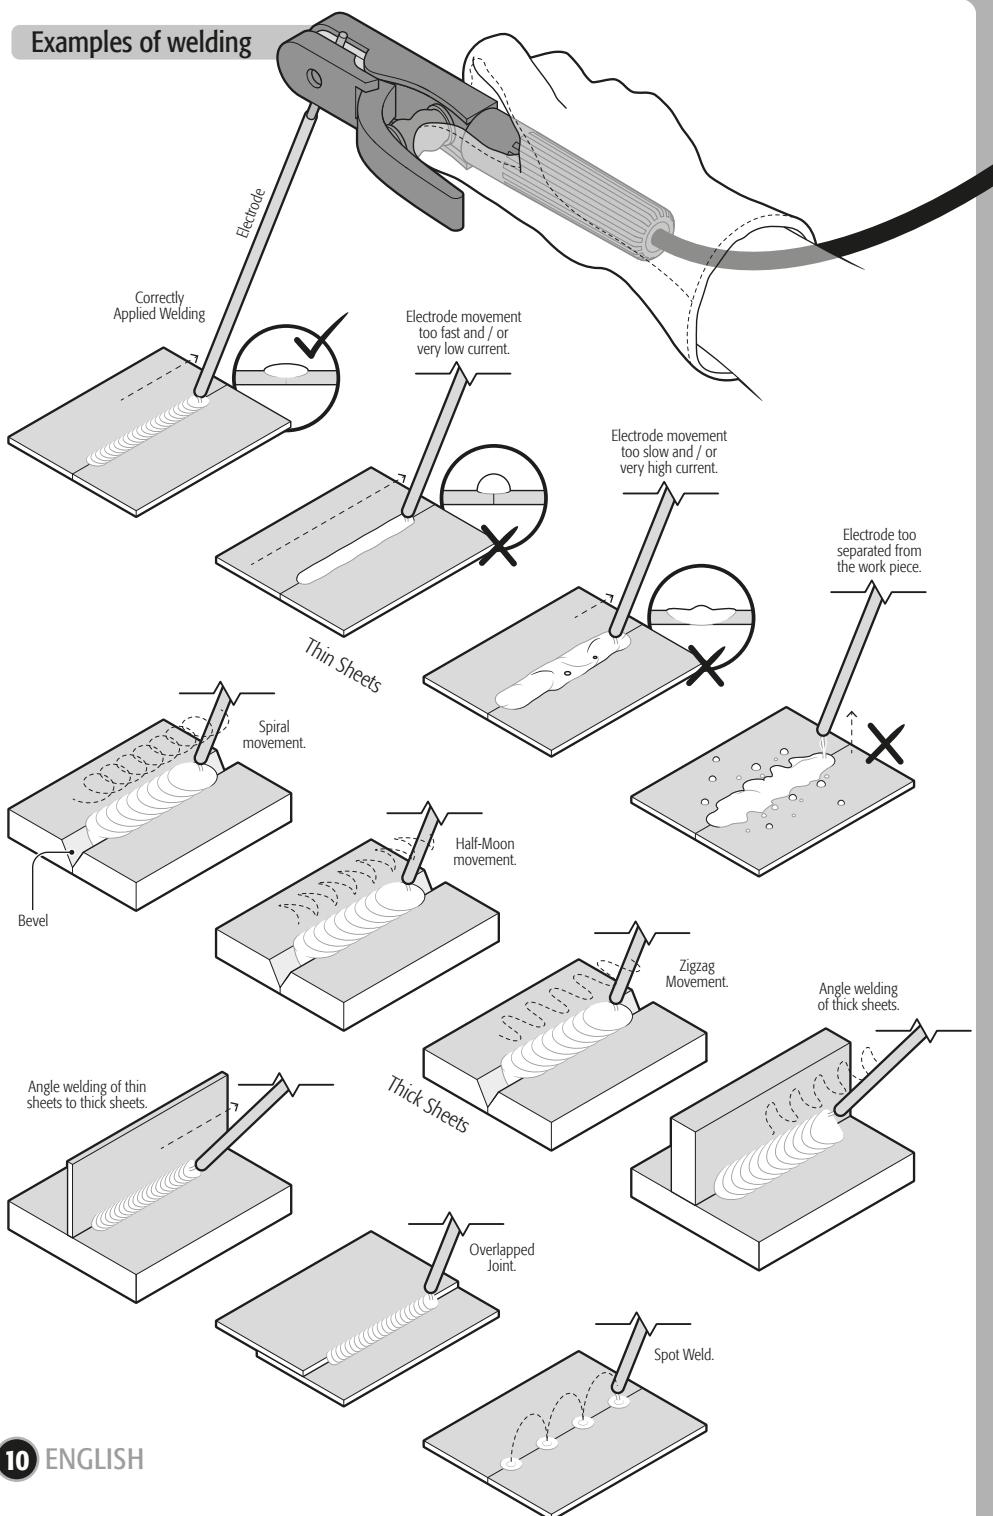

- Type: 6011
Diameter: 3/32", 1/8", 5/32", 3/16", 1/4"
Type: 6013
Diameter: 3/32", 1/8", 5/32", 3/16"
Type: 7018
Diameter: 3/32", 1/8", 5/32", 3/16"

For processes with tungsten electrode (TIG)

- Diameter: 1 mm, 1.6 mm, 2 mm and 2.4 mm

Welding Current (A)	Electrode Angle
20	30°
20 - 100	60° - 90°
100 - 200	90° - 120°

Examples of welding

- The correct use and regular cleansing extend the useful life of the welder.

CAUTION • Only qualified personnel shall carry out repairs. We recommend visiting a  TRUPER® Authorized Service Center to repair your welder, get supplies or accessories.

Regular Maintenance

- Clean dust from the welder with compressed air. If there is too much dust present, clean immediately. Under normal conditions clean once a year. If the welder is exposed to a lot of dust, cleaning should be carried out every three months.
- Altogether with cleaning make a checkup to assure there are no loose parts or components in the welder.
- Keep the welder wiring in good repair.
- The plug shall be checked before each use.

Storage

- In the event the welder will be stored a long period of time, keep it in a dry, well ventilated place to prevent humidity getting inside, or to generate rust or toxic gas. Storage temperature vary between -13 °F to 131 °F and relative humidity shall not be over 90%.

Symbology

	DC symbol
	Electric arc manual welding with coated electrode
	Inert metal - active gas welding, including the use of flux core
	Input circuit, single-phase alternating current and rated frequency symbol
	Work cycle symbol (service factor)
	Nominal welding current symbol
	Conventional load voltage symbol
	Rated open circuit voltage
	Rated power voltage
	Maximum rated power
	Maximum effective power
	Protection degree (solid objects and water submersion)
	Converter - transformer - single-phase static frequency rectifier
	AC symbol
	Electric-arc manual welding with coated electrodes
	Gas shielded arc welding system
	Tungsten inert gas welding

Problem	Cause	Solution
The thermal protection light is ON.	<ul style="list-style-type: none"> The welder has no adequate ventilation. Environment temperature is too high. The welder has been used longer than the recommended work cycle. 	<ul style="list-style-type: none"> Keep the welder least 11.8" away from any walls at to allow air circulation. The welder will recuperate once the temperature gets back to the right range to operate. The welder will recuperate once the temperature gets back to the right range to operate.
The current adjusting control is not working.	<ul style="list-style-type: none"> The potentiometer is broken. 	<ul style="list-style-type: none"> Go to a TRUPER® Authorized Service Center to replace the potentiometer.
The fan is not working or turns very slowly.	<ul style="list-style-type: none"> Faulty switch. Faulty fan. Fault in the connections. 	<ul style="list-style-type: none"> Go to a TRUPER® Authorized Service Center to replace the switch. Go to a TRUPER® Authorized Service Center to repair the fan. Check all the connections.
There is no open circuit voltage.	<ul style="list-style-type: none"> High Voltage, low voltage or one phase is missing. The welder is overheating. Faulty switch. 	<ul style="list-style-type: none"> The welder will recuperate once the temperature is back into the adequate range to operate. Go to a TRUPER® Authorized Service Center to replace the switch.
The electrode holder is too hot; connections + and - are hot.	<ul style="list-style-type: none"> The electrode capacity is too low. The cable gauge is too small. Loose connections. More resistance between the electrode holder and the cable. 	<ul style="list-style-type: none"> Replace the electrode holder with another one with more capacity. Replace the cable with another one within the requirements (see page 3). Clean the rust accumulation and tighten the connections. Clean the rust accumulation and tighten the connections.
Energy source is off.	<ul style="list-style-type: none"> The welder is over-heated. 	<ul style="list-style-type: none"> There is no fault. It is normal that power supply gets cut when the welder goes above its normal working temperature. Wait until the temperature is back to the adequate working range to turn it on again.

If after all the recommended actions have been carried out the problems persist, contact a **TRUPER**® Authorized Service Center.

Authorized Service Centers

In the event of any problem contacting a Truper Authorized Service Center, please see our webpage www.truper.com to get an updated list, or call our toll-free numbers **800 690-6990** or **800-018-7873** to get information about the nearest Service Center.

Solución de problemas

© TRUPER®

Lausa

- La luz de Protección
- La soldadora no suelta con ventilación adecuada.
- Mantenga la soldadora apartada de cualquier pared al menos 30 cm para permitir que el aire circule.
- La soldadora se recuperará una vez que la temperatura regresa a su rango adecuado para operar.
- La soldadora se recuperará una vez que la temperatura de enfriamiento es más rápida que la velocidad de enfriamiento.
- La soldadora se utilizará por más tiempo

- E ventilador no Centro de Serviço Autorizado
- Intercalador descompuerto.
- Añade un Centro de Servicio Autorizado
- Revise las conexiones.

- No hay tensión de circuito abierto.
- La soldadura se está sobre calentando.
- La soldadura es recubierta una vez que la temperatura de fusión disminuye.
- Interruptor descompuerto.
- Añadir un centro de servicio Autorizado
- Remplazar el interruptor.

- No hay ruidos. Es normal que se escuchen los sonidos de la máquina.
- La máquina debe encenderse y apagarse sin problemas.
- Si los problemas persisten a pesar de realizar las acciones correctivas recomendadas, contacte a un Centro de Servicio Autorizado **TRUPER**.

Simbología

- Se debe limpiar el polvo de la soldadura con aire.
- Autovigilante TRUPER® para preparar la soldadura, adquirir suministros o accesorios.
- En caso que la soldadura vaya a estar almacenada por un período largo de tiempo, se debe mantener en un sitio seco y bien ventilado para evitar que le entre humedad, se genere óxido o gases tóxicos. La temperatura debe ser superior a 90%.
- Junto con la limpieza se debe realizar una revisión para asegurar que no haya partes o componentes sueltos en la soldadura.
- Mantener los cables de la soldadura en buen estado.
- Las terminales deben revisarse antes de cada uso.

Almacenamiento

- A ATENCIÓN • Solo personal calificado debe hacer las reparaciones. Se recomienda visitar un Centro de Servicio.
- El uso correcto y una limpieza regular prolongan la vida útil de la soldadura.

- Cuando el electrodo se ha consumido de 1 cm a 2 cm del porta electrodo, es necesario cambiarlo por uno nuevo para poder seguir soldando.
- Atencción! El electrodo se quema a alta temperatura. No tirete demasiado para sostener el con la mano. Póngalo los restos en un contenedor de metal.
- Abra la tuerca del porta electrodo para sostener el electrodo nuevo por el extremo sin recubrimiento. No sostenga el electrodo por la parte recubierta.

Preparativos

- Se recomienda mantener el tablero (3) y cometerce a soldar.
- Se recomienda mantener el soldado para garantizar la protección del gas.

- Cuando inicie el arco eléctrico levante la antorchita para que la punta del electrodo quede a 2 mm de la pieza de tabla (2).
- Cuando para acercar el electrodo a la pieza de tabla (2), levante la antorchita sin separar la boquilla de la pieza de tabla (1).
- Para iniciar el arco apoye en ángulo la boquilla sobre la pieza de tabla (1).

• Gire la válvula de la antorchita (D) para abrir el flujo aproximado en l/min de 6 veces el

• Gire la válvula de la antorchita (D) para abrir el paso del gas. Gire la perilla (E) del regulador para sustrar el flujo del gas hasta obtener un

• Válvula de entrada de gas de la antorchita (B) a la válvula de salida del regulador (C) del gas de protección.

• Conecte la antorchita (A) al borne de salida negativa (-) de la soldadora.

• Conecte el cable de la antorchita (A) al borne de salida positiva (+) de la soldadora, y la pluma para alternar a la pieza de tabla.

• La conexión debe hacerse en polaridad directa:

A NOTA • El led inferior del selector se encenderá.

• Para este proceso se requiere una antorchita AN-GRP0-1 un tanque o lata de gas de protección no inuidos.

• Para este proceso se requiere una antorchita AN-GRP0-1 un tanque o lata de gas de protección no inuidos.

• La soldadura TIG es ideal para soldar acero inoxidable, hierro y cobre.

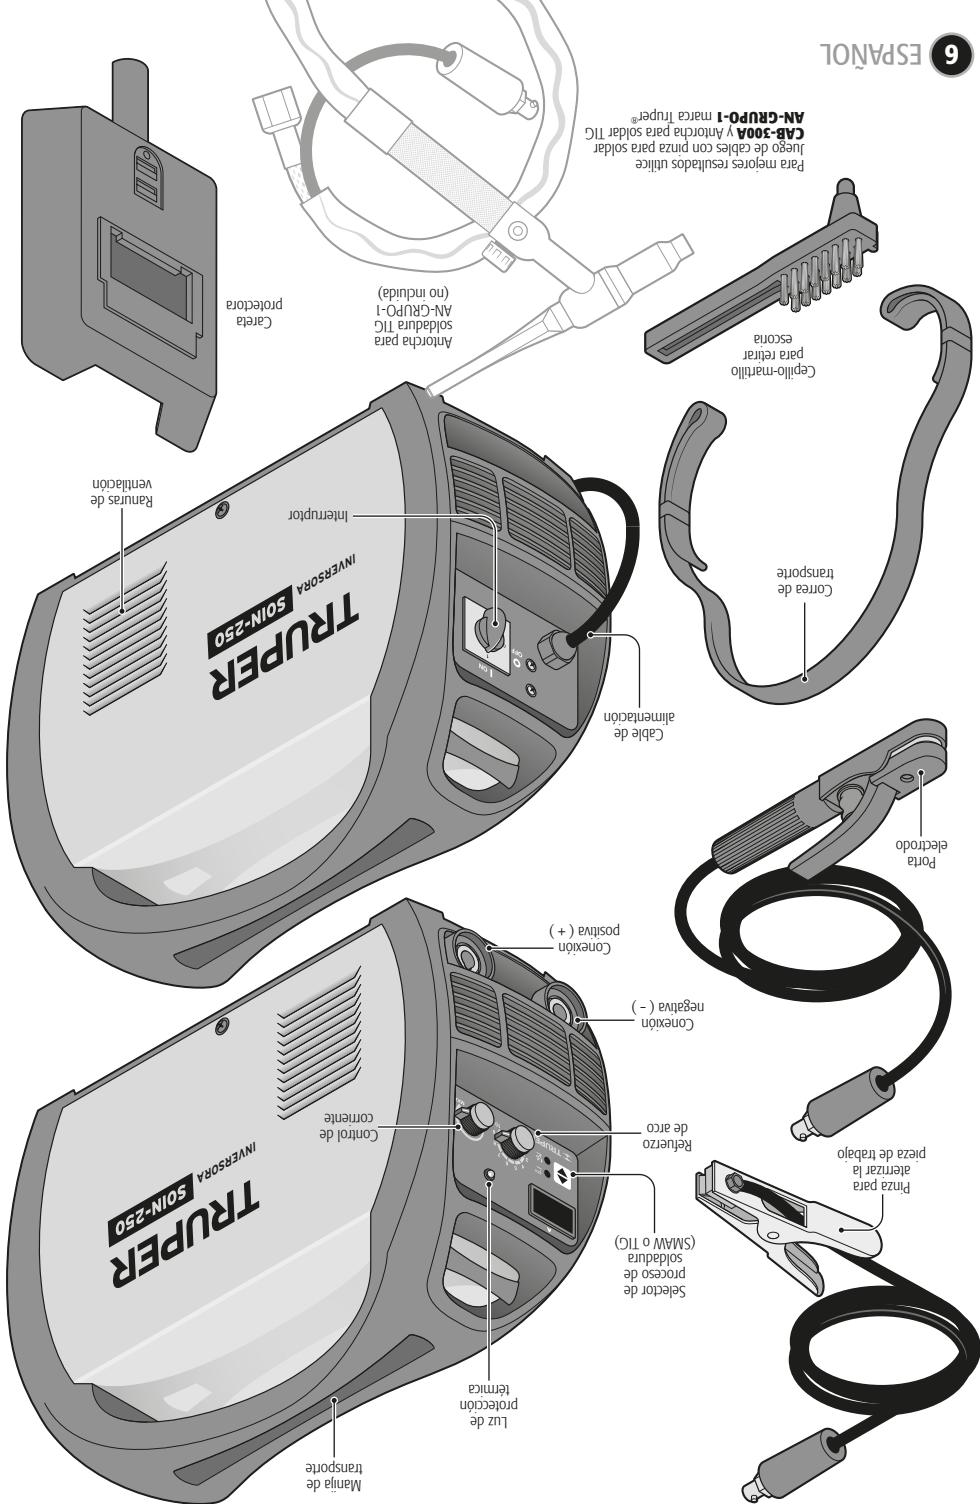

• La soldadura TIG es ideal para utilizar para soldadura TIG: proceso de soldadura de muy alta calidad con gases que no consumibles y acco protegido por gas inerte como argón o helio.

• Esta soldadura inversora puede ser utilizada también para soldadura TIG: proceso de soldadura de muy alta calidad con gases que no consumibles y acco protegido por gas inerte como argón o helio.

TRUPER®

electrodomicésticos o están cerca de él. Personas desapacabilizadas llegan a utilizar cualquier tipo de preparación para la medida. Así, se debe de establecer una medida para asegurarse de que no interfiere con las ilusiones del paciente. Los sistemas de seguridad tienen la capacidad de detectar las instrucciones que las autoridades de salud emiten.

TRUPER® usa dispositivos de seguridad para proteger a los pacientes de las personas con capacidades físicas, sensoriales o mentales reducidas.

Use la herramienta en un centro de servicios de atención médica para el tipo de condición que el paciente tiene. Los sistemas de control son más probables de traeles que las personas con capacidades físicas, sensoriales o mentales reducidas.

Mantenga los accesorios de cortes al rasos y limpios.

Servicio
